KLEUTEC  AgTech with system

Technology for efficient turf cultivation

We offer you products for various lawn and turf care. Our machines are appropriate for the following sectors:

- Turf production
- Parklands maintenance
- Maintenance of green airfields

With our RM series we offer you powerful rotary mowers in the working width of 5,2 m or 8,6 m.

Our turf brush is your opportunity to make the vacuum sweeper more efficient.

RM 5200
RM 8600

The mowers RM 5200 and RM 8600

It's your choice! You can decide between the compact and handy RM 5200 with 5,2 m working width or the powerful RM 8600 with 8,6 m working width. Both machines convince with excellent cutting quality.

Benefits and advantages of the mower

Low weight

With an ingenious machine frame concept the mowers are very strong and on the other hand very light in weight with only 2.400 kg for 8,6 m working width. Hence, you avoid ruts in your fields and the mower is easily moveable with quite small tractors.

Efficient drive

The direct power unit with the tractor PTO leads to a very high efficiency so that the mowing is very fuel saving and cost-effective. There is no complex energy transformation need such as a generator and various electric motors. That saves you investment and weight for the mower.

The standard speed is 540 rpm. Thus, most tractors can work with the eco PTO 540E or even with the PTO 1000 with very reduced engine speed. This leads to even more fuel saving and increases the drivers comfort.

Perfect cut

Each mowing deck is equipped with 5 small blades, each with a diameter of only 38 cm. However, the high speed of 3,600 rpm achieves a clean cut with low power requirements and noise generation. In addition, the mower can adapt well to the ground and, due to the short blades, a very even cut is achieved.

Technical data RM

	RM 5200	RM 8600
Working width	5,2 m	8,6 mm
Cutting height	20-80 mm	
Transport width	2,55 m	3 m
Transport height	2,9 m	4.000 mm
Power requirements	25 – 40 kW	45 – 65 kW
Total weight	1.500 kg	2.400 kg
Drawbar load	300 kg	700 kg
Transport tires	26×12.00-12 (10 PR)	
Deck tires	15×6.00-6 (2 PR)	
Number of mowing decks	3	5
Number of blades	5 blades per deck	
Power unit	Drive shaft 1 3/8"-Z6 (540 U/min)	
painting	Red - Grey	
hydraulik	1 control connection, single acting	2 control connections, single acting

RKB 6000

The innovative turf brush RKB

New designed and developed for professional turfgrass producers is the turf brush RKB. This machine doubles the power of your existing vacuum sweeper.

The RKB is mounted in the tractor front and rakes the turf-clippings from 6m together to 1,2 m in the middle of the tractor. The trailed vacuum sweeper can suck the windrow. With the RKB you double the working width of your vacuum sweeper so that you reduce the working time on the field dramatically.

Furthermore the tractor does not run over the turf-clipping, so it is much easier for the vacuum sweeper and you can run even faster with this combination.

In addition to the rake the turf brush has a harrow effect so the turf keeps stronger and and more equal.

Technical data RKB

	RKB 6000
working width	6 m
windrow width	1,2 m
working height	-40 to 100 mm
transport width	3 m
transport height	3,8 m
power requirements	approx. 15 kW
total weight	approx. 500 kg
tires	15×6.00-6 (2 PR)
painting	Grey
hydraulic	1 control connection, double acting

Clasen Mäher becomes KleuTec

The well-known Clasen mower from cologne changes the name to KleuTec. The high quality and the technical system stays the same. In the future the machines are painted in red and grey instead of black and yellow. We are happy to continue or start the collaboration and we are a young and motivated team at your disposal.

KleuTec – start up in the agricultural technology

KleuTec was founded in 2020 already with the focus on agricultural machines. Besides the turf technology we are working in the manure business with a drag hose system for slurry application. Thereby KleuTec is a company focussed on special machines in the agriculture sector. Together with our employees we develop, produce and sale the machines from norther Germany to all over Europe.

Hubertus Kleuter - from practice

Hubertus Kleuter is the founder and owner of the company KleuTec.

"As a educated farmer I speak your language. I'm coming from a farm in Germany and studied Agriculture with the focus on technology. That helps me a lot to understand the farmers need and to develop machines which meet these requirements."

Hubertus Kleuter

Production in Fintel

In our modern production facilities we are producing and mounting the turf equipment. Due to the high production depth we are able to guarantee highest quality standards. Furthermore we can focus on individual customer requirements and offer you customized products.
